

HOW TO CLEAN A TURBO LINER BEDLINER

Instructions

- 1 Remove all items from the bed of the truck, sweep any dirt and debris out of the bed of the truck.
- 2 Treat any stains on the liner using an appropriate cleaner. Use a product that removes lime, calcium and rust stains, if you notice rust on the liner. An automotive degreaser removes most other stains. Rub the cleaner into the stain using a scrub brush. NOTE: When using these types of products it is recommended that the entire truck is washed after the bed cleaning is complete to make sure that none of the cleaners/degreasers are left on any painted surfaces.
- 3 Spray the truck bed and tailgate with water. Ensure that the entire liner gets wet.
- 4 Apply automotive grade soap to the Turbo Liner. While you don't have to cover the entire liner with the soap, apply enough soap so you can spread it when you scrub the liner.
- 5 Scrub the liner with an automotive deck brush. If you are cleaning your Turbo Liner at a car wash, use the brush that soaps as you scrub.
- 6 Rinse the bed and tailgate of the truck thoroughly until no soap runs off the truck when you rinse.
- 7 Repeat the process if you still see dirty spots on the Turbo Liner.

Some of the cleaning products that might be available at your local hardware or auto parts stores:

Castrol Super Clean: Cleaner & Degreaser

Simple Green: Cleaner & Degreaser

Zep: All Purpose Cleaner & Degreaser

Goof Off: Heavy Duty Spot Remover & Degreaser

Most of these degreasers should be mixed 50/50 with water before using. Usually full a concentration's of these products are only used for areas that have tough stains.

Read their prospective labels for suggested uses. Keep in mind your are basically cleaning plastic. Armor All type products are Not Recommended for bedliner surfaces.
